User Story Title: Capture Additional Dwelling Address

User Story: As a user, I need to be able to capture additional dwelling address as part of the property information in order to provide an accurate quote.

Assumptions:

General

Functionality is based on Exigen 4.10 - Preconfig options for Schedule Personal Property Coverage.

- Exigen error handling functionality is invoked. Errors that are thrown due to data type constraints, i.e., money, numeric, date are included in Exigen error handling. Error messages for data type errors cannot be configured
- The Data Dictionary is the definitive source for data requirements and UI labels
- Wireframes are the definitive source for UI components, layout and fields displayed in the add object list table.
- The Master Message List (MML) shall contain the actual error message text
- Exigen base behavior will be used for Add object functionality. Minimum instance will be consistent with Named Insured / Mortgagee / Additional Insured add object blocks.

User Story Specific:

1. Product and Policy State have been defined.
2. Address validation is out of scope for sprint 1

Supporting Info:

State – Product	HO3; DP3;HO4;HO6

additional addresses:

additional addresses: I'm not clear how this section is different from the "additional rental dwelling section". Is a user supposed to complete this section? why do we have another section that needs to be completed?

Pandarathil, Prasanth

RE: additional addresses:

Additional Rental dwelling section is primarily for capturing Rental information whereas this section does not capture rental information.
